

MISSION

Our mission is true innovation for the window industry. Rayno strives to lead in product information, as well as in quality and service, providing our customers with the best value and best protection compared to any other window film on the market.

THE GUARANTEE

Rayno MonoCarbon series is backed by a reliable warranty program and guaranteed to meet higher standards than any other window film. We offer extensive coverage for both customers and dealers. Specific terms may vary by region and application.

SEE AN AUTHORIZED DEALER OR GO TO RAYNOFILM.COM FOR MORE INFORMATION.

MONOCARBON AUTOMOTIVE SERIES

FIRST RIDE SOLE PRIVILEGE MONOCARBON

RECOMMENDED

Just Got Your First Car – Now What?

Everyone remembers their first car. It'll be your buddy for a long time and you'll have many adventures together. You obviously want to keep your car in good shape, so why settle for less on your first ride, when you can get more comfort and style with an affordable price?

MonoCarbon is a 2-ply, true Carbon based film customized with Rayno's advanced Nano-technology, with no dyes and no metals. Carbon is a stable particle that gives long lasting durability in a rich, black shade. This means less than 1% fading on your vehicle, plus you'll be earning increased UV protection, visibility, and heat protection with no extra effort or money on your part – a little buzz to share about with your friends.

Kickoff down the right path and choose Rayno MonoCarbon for the well-earned attention you deserve with money left over to celebrate! Don't be misled to underperforming, color-fading dyed films or subpar Carbon coated dyed films. Rayno's true premium Nano Carbon film, MonoCarbon, will carry you throughout all your exciting adventures, day in and day out and you will look good and feel good.

Keep it **REAL** with **REAL** Carbon, **REAL** Performance, **REAL** Privilege for the **REAL** you.

COLOR DURABILITY

Never overlook Color Durability (a.k.a. Fading Rate) as this statistic tells you the film's ability to keep not only from turning color but also harmful sun ray protecting performance over time.

Here is the Color Durability test result of MonoCarbon against other dyed films. Our expert engineers used Xenon Test Chamber model Xe-3 and put the films through the same vigorous weathering conditions for Color Durability comparison. After 1,000 hours of testing (equating to 10 years of your car exposed to the sun in real life), other dyed films faded up to 8.6% while **MonoCarbon faded less than 1%**!

You will enjoy your ride with MonoCarbon for years to come!
